RANDIKA ABEYRATHNA

Lead Software Engineer | Java Full Stack | Spring Boot | Microservices | Driving AI Adoption in Engineering
randika.l.abeyrathna@gmail.com • LinkedIn • GitHub

Professional Summary

Full-stack Lead Software Engineer with 9+ years of experience building, modernizing and supporting enterprise Java systems across banking, healthcare, aerospace and financial services. Specialist in Spring Boot microservices with Angular and React frontends, SQL performance tuning across Oracle and DB2, and AWS. At IFS, I lead a team of 8 engineers and drive AI adoption in engineering, building agentic Claude Code workflows, a shared AI knowledge base and an automated pre-PR check used daily by around 10 engineers. Experienced in leading engineering teams, owning architecture end to end and keeping production systems reliable.

Core Skills

- **Languages & Frameworks:** Java, Spring Boot, Spring Security, REST APIs, Microservices, JSP
- **Frontend:** Angular, React, TypeScript, JavaScript, HTML/CSS
- **AI & Developer Productivity:** AI-Assisted Development (Claude Code), Agentic AI Workflows, Prompt & Context Engineering, Custom AI Commands, AI Knowledge Bases, Automated Code Review
- **Databases:** Oracle, DB2, PL/SQL, SQL Performance Tuning, Execution Plan Analysis
- **Messaging & Integration:** Apache Kafka, RabbitMQ
- **Cloud & DevOps:** AWS (EC2, RDS, S3, SQS, SNS), CI/CD Pipelines, Git, Docker
- **Security:** Keycloak, OAuth2 / OpenID Connect, mTLS
- **Leadership:** Team Leadership, Mentoring, Code Reviews, Agile Delivery, Legacy System Modernization, Production Support

Experience

IFS (Contract via Just In Time Group) — Colombo, Sri Lanka

Lead Software Engineer — 06/2025 – Present

- Lead a team of 8 software engineers on the migration of a legacy aerospace maintenance platform to IFS Cloud (Aurena), owning work planning, code reviews and engineering standards.
- Resolve complex Oracle database performance issues by analyzing execution plans, optimizing SQL queries and redesigning database views.
- Work with Angular UI components (data binding, services, async data handling) and shape REST APIs to fit front-end needs.
- Drive the team's adoption of AI in engineering with Claude Code: built and maintain 10–15 reusable AI commands and rules in a shared team repository, used daily by around 10 engineers to complete development tasks faster and more consistently.
- Designed agentic AI workflows that carry out multi-step development tasks such as code analysis, review and validation, with team-defined standards and guardrails for how AI is used.
- Built an AI knowledge base by indexing the repositories, code and documentation the team needs, giving the AI the project context required for accurate code analysis and implementation.
- Built an AI-powered pre-PR check that reviews changes against team rules and validates branches before a pull request is opened. Developers catch issues in 3–4 minutes instead of waiting for the 2–3 hour CI build to fail, reducing wasted build cycles and rework.
- Mentor engineers on effective AI usage, and use AI daily for code analysis, understanding legacy code during the migration, and implementation.

Senior Software Engineer — 08/2024 – 05/2025

- Migrated legacy Java and JSP modules to the IFS Cloud Aurena framework, redesigning Java EE implementations to fit IFS Cloud architecture while preserving existing business functionality.
- Designed and optimized Oracle SQL queries, database views and PL/SQL components to improve application performance and maintainability.
- Performed technical investigations and proofs of concept to evaluate implementation approaches for new requirements.

MEXXAR — Kandy, Sri Lanka

Senior Software Engineer — 01/2024 – 08/2024

- Provided technical leadership for a backend team of 5 engineers by planning sprint work, assigning tasks, reviewing code and mentoring developers throughout the software development lifecycle.
- Worked directly with customers to gather requirements, prioritize features, demonstrate sprint deliverables and incorporate feedback into future development plans.
- Designed backend architecture and developed Spring Boot microservices, ensuring scalable, maintainable and high-quality software.
- Contributed to React front-end features, building components and integrating them with Spring Boot REST APIs.
- Introduced Agile development practices and Jira-based sprint planning, improving project tracking, team collaboration and delivery.
- Implemented and maintained deployment pipelines and managed AWS infrastructure to support reliable deployments and production releases.
- Improved performance, resolved production issues and delivered multiple customer projects with frontend and backend teams.

HCL Technologies Sri Lanka — Colombo, Sri Lanka

Senior Software Engineer — 01/2021 – 01/2024

- Designed, developed and maintained enterprise Java Spring Boot applications using a microservices architecture and Oracle databases for healthcare solutions.
- Resolved complex production issues by analyzing root causes, implementing permanent fixes and minimizing service disruptions.
- Optimized Oracle SQL queries and backend services, cutting response times by ~20% on key healthcare workflows.
- Collaborated with cross-functional teams, including QA, business analysts and infrastructure teams, to deliver high-quality software and production releases.

Just In Time Group (Assigned to Silverlake Digital Economy – Malaysia) — Colombo, Sri Lanka

Software Engineer — 05/2019 – 01/2021

- Developed and supported enterprise digital banking solutions for People's Bank Sri Lanka as part of Silverlake Digital Economy's onsite team.
- Developed, enhanced and maintained Java, Spring Boot and DB2 applications to support new business requirements and production enhancements.
- Provided production support by investigating incidents, resolving defects and deploying application updates to production environments.
- Performed code reviews and identified improvements to application quality and maintainability.
- Worked with IBM WebSphere, RabbitMQ and CI/CD pipelines on enterprise banking applications.

Swarnamahal Financial Services — Colombo, Sri Lanka

Associate Software Engineer — 09/2017 – 05/2019

- Developed and maintained the Pawning Management System, used daily by 100+ users across 17 branches.
- Designed and developed the Human Resource Management System, managing employee information for 500+ employees.
- Maintained the InBank administration system and developed internal business applications using Java and Oracle technologies.
- Worked closely with business users to gather requirements, implement enhancements and provide ongoing application support.

Education

Cardiff Metropolitan University — 2021 – 2022

Master of Science (MSc) in Information Technology – Distinction

IIC University of Technology — 2018 – 2021

Bachelor of Engineering (B.Eng.) in Software Engineering – Second Upper Class
