# RANDIKA ABEYRATHNA

Lead Software Engineer | Backend Engineering | Java | Spring Boot | Oracle | AWS

LinkedIn

## Professional Summary

Lead Software Engineer with over 8 years of experience designing and building enterprise Java backend applications using Spring Boot, Oracle, and AWS. Over the years, I've worked across aerospace, banking, healthcare, and financial services, designing scalable enterprise solutions, improving backend performance, and mentoring engineering teams. I enjoy solving complex technical problems, improving application performance, and mentoring engineers while staying hands-on with development.

## Experience

### IFS (Contract via Just In Time Group)

Colombo, Sri Lanka

Lead Software Engineer

06/2025

- Lead the engineering team by planning work, estimating user stories, reviewing code, mentoring developers, and remaining hands-on with backend development and solution design.
- Partner with product owners and stakeholders to translate business requirements into scalable technical solutions, ensuring timely delivery of enterprise features.
- Play a key role in migrating legacy Java and JSP modules to the IFS Cloud Aurena framework, designing Oracle database structures and supporting a large-scale enterprise modernization initiative.
- Improve application performance by analyzing execution plans, optimizing Oracle SQL queries, redesigning database views, and resolving complex database performance issues.
- Perform technical investigations, proof-of-concepts, and solution design to evaluate technical approaches for complex engineering challenges.
- Mentor engineers through code reviews, technical guidance, and knowledge sharing while promoting engineering best practices.

### IFS (Contract via Just In Time Group)

Colombo, Sri Lanka

Senior Software Engineer

08/2024 - 06/2025

- Migrated legacy Java and JSP modules to the IFS Cloud Aurena framework while preserving existing business functionality.
- Designed and optimized Oracle SQL queries, database views, and PL/SQL components to improve application performance and maintainability.
- Analyzed legacy Java and Java EE implementations and redesigned them to align with IFS Cloud architecture while preserving existing business functionality.
- Performed technical investigations and proof-of-concepts to evaluate implementation approaches for new requirements.
- Developed Oracle database components and backend functionality while improving application performance and maintainability.

### MEXXAR

Kandy, Sri Lanka

Senior Software Engineer

01/2024 - 08/2024

- Provided technical leadership for a backend team of 5 engineers by planning sprint work, assigning tasks, reviewing code, and mentoring developers throughout the software development lifecycle.
- Worked directly with customers to gather requirements, prioritize features, demonstrate sprint deliverables, and incorporate feedback into future development plans.
- Designed backend architecture and developed Spring Boot microservices while ensuring scalable, maintainable, and high-quality software solutions.
- Introduced Agile development practices and implemented Jira-based sprint planning, improving project tracking, team collaboration, and delivery.
- Implemented and maintained deployment pipelines while managing AWS infrastructure to support reliable application deployments and production releases.
- Improved application performance, resolved production issues, and successfully delivered multiple customer projects by collaborating closely with frontend and backend teams.

## Experience

### HCL Technologies Sri Lanka
Colombo, Sri Lanka

Senior Software Engineer
01/2021 - 01/2024

- Designed, developed, and maintained enterprise Java Spring Boot applications using a microservices architecture and Oracle databases for healthcare solutions.
- Resolved complex production issues by analyzing root causes, implementing permanent fixes, and minimizing service disruptions.
- Optimized Oracle SQL queries and backend services to improve application performance, scalability, and maintainability.
- Collaborated with cross-functional teams, including QA, business analysts, and infrastructure teams, to deliver high-quality software and production releases.

### Just In Time Group (Assigned to Silverlake Digital Economy – Malaysia)
Colombo, Sri Lanka

Software Engineer
05/2019 - 01/2021

- Assigned to **Silverlake Digital Economy (Malaysia)** to develop and support enterprise digital banking solutions for People's Bank Sri Lanka.
- Developed, enhanced, and maintained Java, Spring Boot, and DB2 applications while supporting new business requirements and production enhancements.
- Provided production support by investigating incidents, resolving defects, and deploying application updates to production environments.
- Performed code reviews, identified improvement opportunities, and contributed to improving application quality and maintainability.
- Worked closely with cross-functional teams to deliver new features while ensuring system stability and customer satisfaction.
- Gained hands-on experience with IBM WebSphere, RabbitMQ, CI/CD pipelines, and enterprise banking applications.

### Swarnamahal Finacal Services
Colombo, Sri Lanka

Associate Software Engineer
09/2017 - 05/2019

- Developed and maintained the Pawning Management System used across 17 branches, supporting daily business operations.
- Designed and developed the Human Resource Management System used to manage employee information for 500+ employees.
- Maintained the InBank administration system and developed internal business applications using Java and Oracle technologies.
- Worked closely with business users to gather requirements, implement enhancements, and provide ongoing application support.

## Education

### Cardiff Metropolitan University
Master of Science (MSc) in Information Technology

- Distinction

### IIC University of Technology
Bachelor of Engineering (B.Eng.) in Software Engineering

- Second Upper Class

## Skills

Programming Languages: Java · JavaScript · PL/SQL

Backend Technologies:
Spring Boot · Spring MVC · JSP · REST APIs · Microservices · Java EE · IFS Cloud Aurena · Spring Security · Docker

Database: Oracle · PostgreSQL · IBM DB2 · SQL

Cloud & DevOps: AWS (EC2 · RDS · S3 · Route 53 SNS · SQS) · Docker · Jenkins · Git / GitHub/ Bitbucket · CI/CD

Methodologies: Agile · Scrum · TDD
